

Perfluoroalkyl and Polyfluoroalkyl (PFAS)

We do not apply topical treatments to our carpet.

Bentley Mills does not use perfluoroalkyl and polyfluoroalkyl (PFAS) substances in the manufacture of our carpet products.

Further, Bentley Mills does not apply any topical treatments that can be harmful to people and the planet.

PFAS compounds are a class of non-stick, waterproof, stain resistant compounds used in many consumer products and industries, including topical soil and stain treatments. PFAS were phased out of carpet products many years ago and replaced with a non-fluorinated chemistry. At Bentley, we have chosen not to use this non-fluorinated chemistry as it has been proven ineffective; It is non-durable as a topical carpet treatment and easily removed with the first cleaning.
